

Case Study

Royal Queen, Grantham

High definition in your local.

When the Royal Queen public house in Grantham, Lincolnshire decided to bring the site into the 21st century with a complete refurbishment. Avonics designed supplied and installed a full audio and video system including High Deff distribution of Sky HD to the screens.

The audio system consisted of 4 separately controllable zones to give volume and source selection in areas such as the bar, lounge, snug and toilets. Any audio source can be played into any area from CD, iPod, Sky boxes and media player.

High definition video signals are distributed over Cat5 cable to the plasma and LCD screens as well as composite video and normal aerial signals. The HD gives the Royal Queen an edge over other local pubs and attracts extra trade.

The installation was carried out in coordination with the clients designers, architects, builders and other trades to ensure that the installation went smoothly and was completed on time and budget.
